## Releases

## Monthly Survey of Manufacturing

## August 2009

Manufacturing sales declined $2.1 \%$ to $\$ 40.9$ billion in August following a $5.2 \%$ gain in July. The aerospace product and parts and motor vehicle industries were the major contributors to the decline in sales. Sales have been relatively level since February, after declining 20.4\% between October 2008 and January 2009.

Constant dollar manufacturing sales fell $2.3 \%$ in August.

## Manufacturing sales decline in August <br> \$ billions

Sales in 13 of 21 manufacturing industries decreased in August.

## The aerospace product and parts and motor vehicle industries decline

Production in the aerospace product and parts industry fell $35.6 \%$ to $\$ 1.2$ billion. Production in the

## Note to readers

All data in this release are seasonally adjusted and are expressed in current dollars unless otherwise specified.

Preliminary data are provided for the current reference month. Revised data, based on late responses, are updated for the three previous months.

Non-durable goods industries include food, beverage and tobacco products, textile mills, textile product mills, clothing, leather and allied products, paper, printing and related support activities, petroleum and coal products, chemicals, and plastics and rubber products.

Durable goods industries include wood products, non-metallic mineral products, primary metals, fabricated metal products, machinery, computer and electronic products, electrical equipment, appliances and components, transportation equipment, furniture and related products and miscellaneous manufacturing.

## Production-based industries

For the aerospace industry and shipbuilding industries, the value of production is used instead of sales of goods manufactured. This value is calculated by adjusting monthly sales of goods manufactured by the monthly change in inventories of goods in process and finished products manufactured.

Unfilled orders are a stock of orders that will contribute to future sales assuming that the orders are not cancelled.

New orders are those received whether sold in the current month or not. New orders are measured as the sum of sales for the current month plus the change in unfilled orders from the previous month to the current month.
industry has been volatile over the past several months. Excluding the decline in aerospace, manufacturing sales decreased by $0.6 \%$.

Manufacturing sales in the motor vehicle industry fell $6.3 \%$ to $\$ 3.1$ billion. The decline in August follows a $48.8 \%$ gain by the industry in July.

Miscellaneous manufacturing (-10.5\%) and chemical manufacturing ( $-2.5 \%$ ) also reported decreases.

Sales in the petroleum and coal products industry rose $7.2 \%$. The increase in sales was mostly driven by higher prices, as the Industrial Product Price Index for the industry was up $5.8 \%$.

## Sales vary by province

In Quebec, sales decreased $4.0 \%$ in August. A $29.0 \%$ drop in production in the aerospace product and parts industry largely contributed to the provincial decline. Other durable goods industries also reported declines, including computer and electronic products (-14.1\%), miscellaneous manufacturing ( $-11.1 \%$ ) and machinery manufacturing ( $-8.4 \%$ ). Petroleum and coal products ( $+5.0 \%$ ) and food manufacturing ( $+2.7 \%$ ) partially offset the declines reported by durable goods industries.

Sales in Ontario declined 3.2\% in August following an $11.6 \%$ gain in July. The decline in August mostly reflected a $7.4 \%$ decrease in sales in the motor vehicle industry and a $58.5 \%$ drop in aerospace products and parts manufacturing. A $14.3 \%$ drop in miscellaneous manufacturing also contributed to the provincial decline.

In Alberta, a $4.9 \%$ gain in sales largely reflected an increase in the petroleum and coal products industry. Machinery manufacturing (+11.6\%) also contributed to the province's strength in August.

Newfoundland and Labrador and New Brunswick were other provinces with sales increases. Sales declined in Saskatchewan, Prince Edward Island, Nova Scotia and Manitoba. Sales in British Columbia remained unchanged from July.

[^0]
## Inventories continue to decline

Manufacturers reported a $0.7 \%$ decline in inventories compared with July, with levels falling to $\$ 61.0$ billion. Inventories have been decreasing since January 2009.

Inventories of aerospace products and parts ( $-6.5 \%$ ), fabricated metal products ( $-2.3 \%$ ), machinery $(-2.0 \%)$ and food ( $-1.9 \%$ ) were responsible for most of the drop in manufacturing inventories.

Petroleum and coal products and primary metals were the main offsetting industries in August. Petroleum inventories rose $9.7 \%$, reflecting both price and volume increases. Price increases led to the $2.7 \%$ rise in primary metals inventories.

## Inventories continue to decline

The larger percentage decrease in sales relative to the decline in inventories explains the slight rise in the inventory-to-sales ratio from 1.47 to 1.49.

## Unfilled orders drop in August

The backlog of unfilled orders fell $4.2 \%$ to $\$ 54.3$ billion in August. Unfilled orders were 23.7\% lower than the record level of $\$ 71.2$ billion posted in November 2008.

The decrease in August was driven by an 8.3\% decline in the aerospace industry. Excluding aerospace products and parts, unfilled orders rose $0.3 \%$.

New orders increased $0.2 \%$ to $\$ 38.5$ billion in August.

Available on CANSIM: tables 304-0014, 304-0015 and 377-0008.

Definitions, data sources and methods: survey number 2101.

Data from the September Monthly Survey of Manufacturing will be released on November 16.

For more information, or to order data, contact the dissemination officer (toll-free 1-866-873-8789; 613-951-9497; fax: 613-951-3877; manufact@statcan.gc.ca). ## Study: Family violence and shelters for abused women <br> 2007

Family violence accounted for about $23 \%$ of all police-reported violent crime in 2007. Of the nearly 75,800 incidents of police-reported family violence, about 40,200 , or $53 \%$, were violent incidents perpetrated by a current or former spouse or common-law partner. Spousal violence was more likely to occur between current spouses or common-law partners than between former spouses or partners.

Nationally, the rate of police-reported spousal violence was 188 incidents for every 100,000 population in 2007, down $15 \%$ from 1998. This decline was primarily the result of a drop in the police-reported rate of violence committed against women. The rate of violence against men remained relatively stable.

In 2007, as in previous years, women continued to represent the vast majority ( $83 \%$ ) of victims of spousal violence.

The most frequent type of spousal violence offence reported to police was common assault, which includes pushing, slapping and punching but does not involve weapons or serious physical injury. The next most frequently reported offence was major assault, which involves a weapon or results in bodily harm.

Police-reported data show that the types of criminal offences committed against male and female victims of spousal violence were generally similar. However, major assault was an exception. About $23 \%$ of male victims of spousal violence reported a major assault, compared with $13 \%$ of female victims.

In 2008, there were 569 shelters across Canada providing residential services to women and children escaping abusive situations. The Transition Home Survey captured information on the characteristics of the women and children staying in these shelters on a specific "snapshot day," in this case April 16, 2008.

On this date, about 4,300 women and their 3,400 dependent children resided in shelters. About three-quarters of women were there to escape an abusive situation. The remainder were there for other reasons, such as housing or addiction problems.

Of the nearly 2,900 children who had accompanied their mothers fleeing abuse, $69 \%$ were under the age of 10 .

Some 117 shelters, just over 20\%, had to refer 299 women and 148 children elsewhere on "snapshot day", most often because the facility had reached its capacity.

Overall, in the 12-month period from April 1, 2007, to March 31, 2008, admissions to shelters reached just over 101,000 people: 62,000 women and 38,000 children. Over the previous 10 years, admissions to shelters remained relatively stable.

The various types of facilities providing shelter to abused women include transition homes, emergency-type facilities, such as women's emergency centres and emergency shelters, second stage housing and safe home networks. They differ in terms of the length of stay and the array of services offered.

Transition homes, which provide short- to moderate-term housing, were the most common type of shelter. In 2008, they represented $47 \%$ of all shelters, while emergency-type facilities accounted for 26\%.

Since about $70 \%$ of mothers coming to shelters to escape abuse are accompanied by their children, many facilities offer services that address the needs of child residents. About three-quarters provided recreational facilities for children; about half offered specialized programming for child witnesses and victims of abuse.

Note: Spousal violence refers to violence committed by legally married, common-law, separated and divorced partners. Data for spousal violence come from a sub-set of 153 police services, representing about $94 \%$ of Canada's population in 2007, which reported to the newest version of the Uniform Crime Reporting Survey (UCR2.2).

Disclosing spousal violence can be difficult for many victims. As such, not all incidents are reported to the police. This analysis was limited to those incidents of spousal violence reported to the police. Provincial and territorial variations in charging practices, as well as different policies and police resources, may be related to differences in the distribution of offence types across the country.

Information on shelters in Canada was collected through the Transition Home Survey, a biennial census of all residential facilities for female victims of family violence. Since about 9 in 10 shelters prohibited the admission of men, information on men using these facilities is limited.

Definitions, data sources and methods: survey numbers, including related surveys, 3302, 3315 and 3328.

The 2009 edition of Family Violence in Canada: A Statistical Profile (85-224-X, free) is now available. The focus of this edition is a profile of shelters that provide residential services to women and children
fleeing abusive situations. The 2009 edition also presents fact sheets, data tables and figures on spousal violence, family violence against children and youth, family violence against seniors aged 65 and older, and family-related homicides.

From the Publications module of our website, choose All subjects, then Crime and justice. A printed copy is also available from
the National Clearinghouse on Family Violence (toll-free 1-800-267-1291; 613-957-2938).

| Northwest Territories and Nunavut ${ }^{3}$ | 3 | 0 | 2 | 2 | 0 | 0 | 7 | 47 |

1. Includes Ontario's Family Resource Centres, Manitoba's Interim housing, satellites and other facilities not otherwise classified.
2. Rates are calculated based on 100,000 population of married, common-law and separated women. Separated includes persons currently married, but who are no longer living with their spouse (for any reason other than illness or work) and have not obtained a divorce. Persons who are separated but who live with a common-law partner are not included. Population estimates are provided by Statistics Canada, Demography Division. Populations as of July 1: preliminary post-censal estimates for 2007.
3. Due to a limited number of facilities in conjunction with low response rates for Northwest Territories and Nunavut, information for shelters in these territories has been combined, for reasons of confidentiality and data quality.

## Federal government spending on science and technology

2009/2010 (intentions)
The federal government's spending on science and technology is expected to reach $\$ 10.7$ billion in the fiscal year 2009/2010. Science and technology spending is composed of research and development expenditures and related scientific activities expenditures.

Intended spending on research and development for $2009 / 2010$ will be $\$ 6.9$ billion. Related scientific activities, which include the gathering, processing and analyzing of data; information services; museum services; feasibility and policy studies; and education support will receive $\$ 3.7$ billion.
